Images of the World Trade Center towers collapsing in New York were still fresh in the minds of the first American troops arriving ... Americans leave with the Taliban rapidly claiming fresh territory ...

The future of the U.S. Supreme Court hangs in the balance like never before. Will conservatives or liberals succeed in remaking the court in their own image? In *A Constitution of Many Minds*, acclaimed law scholar Cass Sunstein proposes a bold new way of interpreting the Constitution, one that respects the Constitution's text and history but also refuses to view the document as frozen in time. Exploring hot-button issues ranging from presidential power to same-sex relations to gun rights, Sunstein shows how the meaning of the Constitution is reestablished in every generation as new social commitments and ideas compel us to reassess our fundamental beliefs. He focuses on three approaches to the Constitution--traditionalism, which grounds the document's meaning in long-standing social practices, not necessarily in the views of the founding generation; populism, which insists that judges should respect contemporary public opinion; and cosmopolitanism, which looks at how foreign courts address constitutional questions, and which suggests that the meaning of the Constitution turns on what other nations do. Sunstein demonstrates that in all three contexts a "many minds" argument is at work--put simply, better decisions result when many points of view are considered. He makes sense of the intense debates surrounding these approaches, revealing their strengths and weaknesses, and sketches the contexts in which each provides a legitimate basis for interpreting the Constitution today. This book illuminates the underpinnings of constitutionalism itself, and shows that ours is indeed a Constitution, not of any particular generation, but of many minds.

The future of the U.S. Supreme Court hangs in the balance like never before. Will conservatives or liberals succeed in remaking the court in their own image? Sixty years after Jessup's *Transnational Law Lectures*, this collection traces the field's development and significance to the present day.

What sort of methods are best suited to understanding constitutional doctrines and practices? Should we look to lawyers and legal methods alone, or should we draw upon other disciplines such as history, sociology, political theory, and moral philosophy? Should we study constitutions in isolation or in a comparative context? To what extent must constitutional methods be sensitive to empirical data about the functioning of legal practice? Can ideal theory aid our understanding of real constitutions? This volume brings together constitutional experts from around the world to address these types of questions through topical events and challenges such as Brexit, administrative law reforms, and the increasing polarisations in law, politics, and constitutional scholarship. Importantly, it investigates the ways in which we can ensure that constitutional scholars do not talk past each other despite their persistent - and

often fierce - disagreements. In so doing, it aims systematically to re-examine the methodology of constitutional theory.

New to English law? Need to know how rules are made, interpreted and applied? This popular and well-established textbook will show you how. It simplifies legal method by combining examples with an account of rules in general: the who, what, why and how of interpretation. Starting with standpoint and context, it identifies factors that give rise to doubts about the interpretation of a rule and recommends a systematic approach to analysing those factors. Questions and exercises integrated in the text and on the accompanying website will help you to develop skills in reading, interpreting and arguing about legal and other rules. The text is fully updated on developments in the legislative process and the judicial interpretation of statutes and precedent. It includes a new chapter on 'The European Dimension' reflecting the changes brought about by the Human Rights Act 1998.

Law and the Limits of Reason asks "what are the consequences of recognizing the limits of reason within the legal system?" In particular, what are the consequences for the allocation of lawmaking authority among judges, legislators, and administrative agencies or executive officials? Vermeule examines the conditions under which the limits of reason support a greater or lesser allocation of authority to one institution or another.

The philosophical problem of identity and the related problem of change go back to the ancient Greek philosophers and fascinated later figures including Leibniz, Locke, and Hume. Heraclitus argued that one could not swim in the same river twice because new waters were ever flowing in. When is a river not the same river? If one removes one plank at a time when is a ship no longer a ship? What is the basic nature of identity and persistence? In this book, André Gallois introduces and assesses the philosophical puzzles posed by things persisting through time. Beginning with essential historical background to the problem he explores the following key topics and debates: mereology and identity, including arguments from 'Leibniz's Law' the constitution view of identity the 'relative identity' argument concerning identity temporary identity four-dimensionalism, counterpart and multiple counterpart theory supervenience the problem of temporary intrinsics the necessity of identity Indeterminate identity presentism criteria of identity conventionalism about identity. Including chapter summaries, annotated further reading and a glossary, this book is essential reading for anyone seeking a clear and informative introduction to and assessment of the metaphysics of identity.
