Part A In a physics laboratory experiment, a coil with 190 turns enclosing an area of 12.4 cm^2 is rotated during the time interval $4.40 \times 10^{-2} \text{ s}$ from a position in which its plane is perpendicular to Earth's magnetic field to one in which its plane is parallel to the field. The magnitude of Earth's magnetic field at the lab location is $5.70 \times 10^{-5} \text{ T}$.

The aim of a lab course in the Advanced Physics Teaching Lab is:

- Learn physics by proper preparation for the experiments and by doing.
- Learn experimental techniques. All theories have to be proven by experiments and new discoveries mostly come from very advanced measurements.

Edition includes a set of "computer-assisted experiments" that allow students and instructors to use this modern equipment. This option also allows instructors to find the appropriate balance between traditional and computer-based experiments for their courses. By analyzing data through two different methods, students gain a greater understanding of the concepts behind the experiments. The manual includes 14 integrated experiments—computerized and traditional—that can also be used independently of one another. Ten of these integrated experiments are included in the standard (bound) edition; four are available for customization. Instructors may elect to customize the manual to include only those

experiments they want. The bound volume includes the 33 most commonly used experiments that have appeared in previous editions; an additional 16 experiments are available for examination online. Instructors may choose any of these experiments—49 in all—to produce a manual that explicitly matches their course needs. Each experiment includes six components that aid students in their analysis and interpretation: Advance Study Assignment, Introduction and Objectives, Equipment Needed, Theory, Experimental Procedures, and Laboratory Report and Questions.

This Laboratory Manual describes in detail the set of twenty-one experiments generally done the introductory physics courses. Each experiment is accompanied by a set of PreLab Activities, in order to prepare the students for the experiments. Questions with answers for the Viva Voce are presented for each of the experiments. Some of the experiments are accompanied with a Project, which is an activity to extend the experiments into the research domain.

The book has several appendices covering important aspects such as, Writing a Lab Report; use of Spreadsheets; SI System of Units & Prefixes; Physical Constants; Greek Alphabet; and Mathematical Symbols. The last appendix is on the landmark event: 2015 the International Year of Light and Light-based technologies. Lastly we have the English-Arabic Glossaries, which shall be useful to the Arabic speaking students.
