This paper investigates the relation between growth forecast errors and planned fiscal consolidation during the crisis. We find that, in advanced economies, stronger planned fiscal consolidation has been associated with lower growth than expected, with the relation being particularly strong, both statistically and economically, early in the crisis. A natural interpretation is that fiscal multipliers were substantially higher than implicitly assumed by forecasters. The weaker relation in more recent years may reflect in part learning by forecasters and in part smaller multipliers than in the early years of the crisis.

After 2008, private-sector spending took a decade to recover. Yair Listokin thinks we can respond more quickly to the next meltdown by reviving and refashioning a policy approach, used in the New Deal, to harness law ' s ability to function as a macroeconomic tool, stimulating or relieving demand as required under certain crisis conditions.

Over the course of the twentieth century, education was a key site for envisioning opportunities for African Americans, but the very schools they attended sometimes acted as obstacles to black flourishing. Educating Harlem brings together a multidisciplinary group of scholars to provide a broad consideration of the history of schooling in perhaps the nation ' s most iconic black community. The volume traces the varied ways that Harlem residents defined and pursued educational justice for their children and community despite consistent neglect and structural oppression. Contributors investigate the individuals, organizations, and initiatives that fostered educational visions, underscoring their breadth, variety, and persistence. Their essays span the century, from the Great Migration and the Harlem Renaissance through the 1970s fiscal crisis and up to the present. They tell the stories of Harlem residents from a wide variety of social positions and life experiences, from young children to expert researchers to neighborhood mothers and ambitious institution builders who imagined a dynamic array of possibilities from modest improvements to radical reshaping of their schools. Representing many disciplinary perspectives, the chapters examine a range of topics including architecture, literature, film, youth and adult organizing, employment, and city politics. Challenging the conventional rise-and-fall narratives found in many urban histories, the book tells a story of persistent struggle in each phase of the twentieth century. Educating Harlem paints a nuanced portrait of education in a storied community and brings much-needed historical context to one of the most embattled educational spaces today.

The Handbook of Historical Economics guides students and researchers through a quantitative economic history that uses fully up-to-date econometric methods. The book's coverage of statistics applied to the social sciences makes it invaluable to a broad readership. As new sources and applications of data in every economic field are enabling economists to ask and answer new fundamental questions, this book presents an up-to-date reference on the topics at hand. Provides an historical outline of the two cliometric revolutions, highlighting the similarities and the differences between the two Surveys the issues and principal results of the "second cliometric revolution" Explores innovations in formulating hypotheses and statistical testing, relating them to wider trends in data-driven, empirical economics

Focused on Dhaka, and applicable to other cities, this book uses geospatial techniques to explore land use, climate variability, urban sprawl, population density modeling, flooding, water quality, urban growth modeling, infectious disease and quality of life.

Saving The Last Grizzlies As this action-packed sequel to Bearstone opens, Cloyd Atcitty and his rancher friend Walter Landis are heading back into the mountains, this time chasing the old man's dream of finding a lost Spanish gold mine. But when Cloyd hears that a mother grizzly and her cubs have been sighted nearby, he immediately hopes it might be the mate of the bear he had tried to save from a hunter the previous summer. When the mother bear dies in a tragic accident, Cloyd realizes that if her cubs don't survive, grizzlies will disappear from Colorado forever. He refuses to leave the cubs, determined to stay with them until they can den. But with winter deepening in the mountains, can Cloyd himself survive?

This rigorous but brilliantly lucid book presents a self-contained treatment of modern economic dynamics. Stokey, Lucas, and Prescott develop the basic methods of recursive analysis and illustrate the many areas where they can usefully be applied.
