High doses of vitamins have been used to treat cancer. This book explores the ways Vitamin C retards cancers through the perturbation of multiple cellular pathways, by eliciting a hypoxic response in cancer cells, by stimulation of radio-sensitivity, and by reprogramming somatic cell activities. A chapter summarizes clinical trials and therapies.

Research on vitamin C and its effects on cancer is growing in popularity around the world as positive research continues to accumulate building a stronger case for its effectiveness. This concise SpringerBrief on Vitamin C and Cancer presents the latest findings on how vitamin C induces apoptosis. A high concentration of vitamin C allows for ascorbate to generate hydrogen peroxide in tissue that can selectively kill cancer cells. Research has confirmed that high-dose vitamin C is cytotoxic to a wide variety of cancer cell lines, and that it also boosts the anti-cancer activity of several common chemotherapy drugs. Vitamin C also does more than just kill cancer cells. It boosts immunity by stimulating collagen formation to help the body wall off the tumor. It inhibits hyaluronidase, an enzyme that tumors use to metastasize and invade other organs throughout the body. This concise and up-to-date Brief is geared towards cancer researchers and scientists, as well as physicians interested in the basic science and the translational potential of vitamin C in cancer therapeutics.

A study of the development and rejection of vitamin C as a treatment for cancer, this text also explores the evaluation process of such a contentious treatment. Based on social, economic and financial considerations, it sees these decisions as political rather than objective assessments.

In case studies and statistics, here are the results of Dr. Hoffer's nutritional or orthomolecular treatment on hundreds of patients suffering from various forms of cancer. These results show that megadoses of vitamin C and other nutrients are highly effective in reversing the progress of this disease in many cases—and also improve patients' the quality of life. Vitamin C & Cancer refutes critics of megavitamin treatment for cancer and offers new hope to cancer patients for surviving this disease.

Looks at vitamin C's value in cancer prevention and treatment

The objective of this report was to conduct a search of the published literature on the use of supplement forms of the antioxidants, vitamin C, vitamin E, and coenzyme Q10, for the treatment and prevention of cancer and, on the basis of that search, to evaluate the evidence for the efficacy of these antioxidants. A broad search revealed sufficient literature to support a detailed review of the use of two of these antioxidants for cancer. Patients with cancer commonly try a variety of nontraditional treatments that fit the broad category known as Complementary and Alternative Medicine (CAM). However, evidence is lacking for the effectiveness of most CAM therapies for cancer. Among the CAM therapies publicized by the popular press for cancer treatment are several supplementary antioxidants: vitamin C, vitamin E, and coenzyme Q10. It has long been argued that the adequacy of the vitamin supply to cells and tissues influences the development, progress, and outcome of cancers. A major challenge to the integrity and function of cells and tissues is thought to come from the uncontrolled formation of free radicals. Free radicals may, alone or in combination, attack cell membranes and DNA. The body has evolved antioxidant defenses to protect against free radical induced damage. It is postulated that the antioxidant vitamins E and C and coenzyme Q10 are potentially involved in these antioxidant defenses and that some diseases might be prevented by increasing intake of antioxidants, either through increasing the dietary intake of antioxidant-rich foods or taking antioxidant supplements. However, it should be noted that while free radicals have been implicated in over 100 human diseases, this implication does not constitute proof of their role in disease formation or that preventing the formation or function of free radicals can prevent or cure disease.

The most up-to-date and complete resource on the powerful benefits of micronutrients for cancer treatment and prevention • Written by the nation ' s leading expert on vitamins and cancer research • Reveals how to maximize the benefits of your cancer treatment program while minimizing the side effects of chemotherapy and radiation • Shows how to counteract the carcinogenic effects of dental X-rays, CT scans, mammograms, cell phones, and other unavoidable hazards of modern life • Provides an easy-to-follow program of nutritional supplements to improve your odds of avoiding and beating cancer Despite extensive research and the development of new treatments and drugs, the U.S. mortality rate from cancer has not changed during the past several decades. Yet there are promising nutritional ways of avoiding and even beating cancer. In this completely revised and expanded edition, leading anticancer researcher Kedar N. Prasad and doctor K. Che Prasad reveal the latest revolutionary discoveries in the use of antioxidants and micro-nutrients to prevent and treat cancer—and also help with heart disease, Alzheimer ' s, and Parkinson ' s. Providing a simple nutritional program to follow, the authors show how micro-nutrients, vitamins, and antioxidants can enhance the beneficial effects of conventional cancer treatments, decrease their toxic side effects, improve long-term prognosis, and reduce the risk of new cancer. Explaining how antioxidants regulate gene expression and cancer heredity, the authors detail how to counteract the risks of dental and medical X-rays, CT scans, mammograms, cell phones, frequent flying, and other unavoidable hazards of modern life; reduce the oxidative stress of free radicals in the blood; and decrease chronic inflammation. Reviewing recent studies, they deflate the controversies surrounding the use of antioxidants in cancer treatment, revealing everything from the reason why many vitamins in foods are destroyed

during storage to the surprising role of selenium in cancer prevention.
