Hello Everybody,  
i have a problem  
with a Fanuc  
powermate model  
E It is  
connected to  
Fanuc 16i-MA  
Controller, but  
we've lost the  
powermate's  
parameters. We  
have another  
machine with the

same parameters,  
we want to save  
those parameter  
into a Flash  
Card, and then  
load those  
parameter to the  
other powermate.  
Does Somebody  
have a procedure  
to do that?

Now here is the  
tricky part:

Parameters and  
Macro Variables  
are Two  
Different  
Things! I don't  
know why we like  
to call it  
“Parameterized  
Programming” and  
then immediately

quit talking  
about  
Parameters,  
which have  
little to do  
with

Parameterized  
Programming.

It's tempting to  
think Parameters  
are just System  
Variables (more
