Although inflammation is the hallmark of most infectious diseases, it may also be associated with neoplasia and dysplasia (e.g., inflammatory carcinoma), autoimmune diseases (i.e., rheumatoid nodule; figure 1D), allergic responses (i.e., hypersensitivity pneumonitis), metaplastic reactive and reparative changes (i.e., reflux esophagitis and Barrett's metaplasia), and idiopathic disorders such as Wegener's granulomatosis and sarcoidosis. Many of these noninfectious disorders are treated

Cases in Clinical Infectious Disease

Practice uses case studies to illustrate how  
the infectious disease clinician processes  
and integrates data to arrive at a diagnosis.

This type of hands-on approach,  
invaluable in training programs, is utilized  
to take the reader through initial patient  
encounter, through the history and  
physical examination, to simple laboratory  
findings and stains, to a final diagnosis, in  
a way that is easily accessible to clinicians,  
students, and laboratory personnel ...
