<p>ICF International and the U.S. Department of Transportation (USDOT), Federal Highway Administration (FHWA), and Federal Transit Administration (FTA), along with experts from the transportation industry, collaborated to produce the Performance-Based Planning and Programming Guidebook. Over the past two decades, transportation agencies have increasingly applied performance management—a strategic approach that uses performance data to support decisions to help achieve desired performance outcomes. Performance-based planning and programming (PBPP) refers to the application of performance management within planning and programming processes of transportation agencies to achieve desired performance outcomes for the multimodal transportation system. This guidebook describes the PBPP process and provides examples of effective practices to help practitioners advance these approaches in their own planning and programming activities.</p>

<p>This volume explores how Gibraltarian Britishness was constructed over the course of the twentieth century. Today most Gibraltarians are fiercely proud of their Britishness, sometimes even describing themselves as ‘ more British than the British ’ and Gibraltar ’ s Chief Minister in 2018 announced in a radio interview that “ We see the world through British eyes. ” Yet well beyond the mid-twentieth century the inhabitants of the Rock were overwhelmingly Spanish speaking, had a high rate of intermarriage with Spaniards, and had strong class links and shared interests with their neighbours across the border. At the same time, Gibraltarians had a very clear secondary status with respect to UK British people. By the beginning of the twenty-first century, however, Gibraltarians speak more English than Spanish (with increasing English monolingualism), have full British citizenship and are no longer discriminated against based on their ethnicity; they see themselves as profoundly different culturally to Spanish people across the border. Bordering on Britishness explores and interrogates these changes and examines in depth the evolving relationship Gibraltarians have with Britishness. It also reflects on the profound changes Gibraltar is likely to experience because of Brexit when its border with Spain becomes an external EU border and the relative political strengths of Spain and the UK shift accordingly. If Gibraltarian Britishness has evolved in the past it is certain to evolve in the future and this volume raises the question of how this might change if the UK ’ s political and economic strength — especially with respect to Gibraltar — begins to wane.</p>
<p>This book, which originally appeared as a special issue of TDR/The Drama Review, explores the myriad aesthetic, cultural, and experimental possibilities of radiophony and sound art. Art making and criticism have focused mainly on the visual media. This book, which originally appeared as a special issue of TDR/The Drama Review, explores the myriad aesthetic, cultural, and experimental possibilities of radiophony and sound art. Taking the approach that there is no single entity that constitutes “radio,” but rather a multitude of radios, the essays explore various aspects of its apparatus, practice, forms, and utopias. The approaches include historical, political, popular cultural, archeological, semiotic, and feminist. Topics include the formal properties of radiophony, the disembodiment of the radiophonic voice, aesthetic implications of psychopathology, gender differences in broadcast musical voices and in narrative radio, erotic fantasy, and radio as an electronic memento mori. The book includes a new piece by Allen Weiss on the origins of sound recording. Contributors John Corbett, Tony Dove, Ren é Farabet, Richard Foreman, Rev. Dwight Frizzell, Mary Louise Hill, G. X. Jupitter-Larsen, Douglas Kahn, Terri Kapsalis, Alexandra L. M. Keller, Lou Mallozzi, Jay Mandeville, Christof Migone, Joe Milutis, Kaye Mortley, Mark S. Roberts, Susan Stone, Allen S. <p>The Educational Significance of Human and Non-Human Animal Interactions explores human animal/non-human animal interactions from different disciplinary perspectives, from education policy to philosophy of education and ecopedagogy. The authors refute the idea of anthropocentrism (the belief that human beings are the central or most significant species on the planet) through an ethical investigation into animal and human interactions, and ‘real-life’ examples of humans and animals living and learning together. In doing so, Rice and Rud outline the idea that interactions between animals and humans are educationally significant and vital in the classroom.</p>

Whether or not you use a computer, you probably use a telephone, electric power, and a bank. Although you may not be aware of their presence, networked computer systems are increasingly becoming an integral part of your daily life. Yet, if such systems perform poorly or don't work at all, then they can put life, liberty, and property at tremendous risk. Is the trust that we--as individuals and as a society--are placing in networked computer systems justified? And if it isn't, what can we do to make such systems more trustworthy? This book provides an assessment of the current state of the art procedures for building trustworthy networked information systems. It proposes directions for research in computer and network security, software technology, and system architecture. In addition, the book assesses current technical and market trends in order to better inform public policy as to where progress is likely and where incentives could help. Trust in Cyberspace offers insights into: --The strengths and vulnerabilities of the telephone network and Internet, the two likely building blocks of any networked information system. --The interplay between various dimensions of trustworthiness: environmental disruption, operator error, "buggy" software, and hostile attack. --The implications for trustworthiness of anticipated developments in hardware and software technology, including the consequences of mobile code. --The shifts in security technology and research resulting from replacing centralized mainframes with networks of computers. --The heightened concern for integrity and availability where once only secrecy mattered. --The way in which federal research funding levels and practices have affected the evolution and current state of the science and technology base in this area. You will want to read this book if your life is touched in any way by computers or telecommunications. But then, whose life isn't?
