value of an expression.
Queries can get the value of
the expression from the
index instead of computing
it.

Using Indexes in Database Applications - Oracle

By default, the CREATE INDEX
statement creates a btree
index. When you create a new
table with a primary key,
Oracle automatically creates
a new index for the primary
key columns. Unlike other
database systems, Oracle
does not automatically
create an index for the
foreign key columns. Oracle

Creating Indexes for One or More Columns

PL/SQL is a procedural language designed specifically to embrace SQL statements within its syntax. PL/SQL program units are compiled by the Oracle Database server and stored inside the database. And at run-time, both PL/SQL and SQL run within the same server process, bringing optimal efficiency. PL/SQL automatically inherits the robustness, security, and portability of the Oracle Database.

The Associative arrays were the first ever collection type to be created in Oracle in its 7 th version by the name, PL/SQL tables.

Ironically, they have never been behaving anything like a traditional heap table back then. From the Oracle version 8, they were given a new name as Index-by tables, meaning that these are tables with index values.
