How to use Systems Thinking to improve your business.

Author Sylvia Stone spent many years weeping because of the unfortunate events she experienced in her life. She held too tightly to the past without understanding its true value, and it prevented her from living a joyful life. She started listening to the stories of others and realized she also had a story to tell--her journey to enlightenment and transcendence. In Seeing the Forest through the Trees, Stone shares a collection of memories from her lifetime and how these helped her become who she is today. She addresses topics such as family dysfunction, sexuality, addiction, sorrow, and betrayal. She tells how she invoked a search for understanding, and it guided her to the path of self-exploration to find balance and inner peace in spite of the challenges she's faced. Offering an honest, direct, and sometimes comical explanation of Stone's journey to hell and back, Seeing the Forest through the Trees narratees her story as a vehicle to offer encouragement to others. She communicates the importance of finding one's strengths by examining the roots, reclaiming them, and putting all the other experiences to bed.

Imagine you are a young person seeking an education, career, a loving family, a dream home, and all the good things this world has to offer. Having gone to college, married your soul mate, conceived a miraculous son, and built your dream home, you are well on your way when you are diagnosed with a brain tumor and told by a neurosurgeon that you are going to go blind and die. But God saves your life in an eight-hour brain surgery. He gives you an incredible near-death experience in a second brain surgery in which you are shown amazing knowledge that is so far above what this world knows that you are filled with the unspeakable joy of being able to understand this knowledge. Then God removes all this understanding from you except for two words and calls you to recreate this knowledge from the Bible and share it with others. Come with me as we recreate this knowledge by piecing together amazing truths and hidden wisdom found in the Word of God, and we will learn things we never knew that we never knew. The word "mystery" is found in the Bible some twenty-one times along with many parables, signs, metaphors, and symbolic language. Someone once described the Bible as a ten thousand-piece puzzle to be solved without the benefit of a picture on the box to guide you. We will piece together these truths, going into the ancient Hebrew and Greek definitions when necessary, to understand what the writers of the Bible understood, to create a picture of reality that goes far beyond this world we know. This understanding will challenge what we believe to be true and change what we desire in our hearts. And that is exactly what the Bible was meant to do.

Future Sense is the latest decision making framework from H B Gelatt. It is the culmination of 60 years of studying, speaking and writing about decision making, with more to come.This book represents what HB thinks is the status of the process of decision making today. And the need for Future Sense. Now more than ever, he believes it is time to "see the forest and the trees" as we create our future within each ofus.Future Sense is an approach for traveling the journey to the future. This new approach to decision making requires you to learn to recover some of your "child-like" ways: being open, playful, curious, receptive, even foolish. And to develop your creativity, to keep asking questions, and to be inclusive.Future Sense involves making changes inside you. Only one person can do that. Future Sense is an inside job. What lies behind you and before you are important. But what lies within you is crucial.

Comprehensive and beautifully illustrated, this is the definitive forest ecology handbook.

NEW YORK TIMES BEST SELLER • From the world's leading forest ecologist who forever changed how people view trees and their connections to one another and to other living things in the forest—a moving, deeply personal journey of discovery Suzanne Simard is a pioneer on the frontier of plant communication and intelligence; she's been compared to Rachel Carson, hailed as a scientist who conveys complex, technical ideas in a way that is dazzling and profound. Her work has influenced filmmakers (the Tree of Souls of James Cameron's Avatar) and her TED talks have been viewed by more than 10 million people worldwide. Now, in her first book, Simard brings us into her world, the intimate world of the trees, in which she brilliantly illuminates the fascinating and vital truths--that trees are not simply the source of timber or pulp, but are a complicated, interdependent circle of life; that forests are social, cooperative creatures connected through underground networks by which trees communicate their vitality and vulnerabilities with communal lives not that different from our own. Simard writes--in inspiring, illuminating, and accessible ways--how trees, living side by side for hundreds of years, have evolved, how they perceive one another, learn and adapt their behaviors, recognize neighbors, and remember the past; how they have agency about the future; elicit warnings and mount defenses, compete and cooperate with one another with sophistication, characteristics ascribed to human intelligence, traits that are the essence of civil societies--and at the center of it all, the Mother Trees: the mysterious, powerful forces that connect and sustain the others that surround them. Simard writes of her own life, born and raised into a logging world in the rainforests of British Columbia, of her days as a child spent cataloging the trees from the forest and how she came to love and respect them—embarking on a journey of discovery, and struggle. And as she writes of her scientific quest, she writes of her own journey--of love and loss, of observation and change, of risk and reward, making us understand how deeply human scientific inquiry exists beyond data and technology, that it is about understanding who we are and our place in the world, and, in writing of her own life, we come to see the true connectedness of the Mother Tree that nurtures the forest in the profound ways that families and human societies do, and how these inseparable bonds enable all our survival.

Howard Kainz addresses several areas of Hegel's Phenomenology that are often overlooked in the interest of ensuring that readers do not "miss the trees for the forest." He argues that these "trees" are of interest in their own right, and keys to the ongoing appreciation of Hegel's work.

No one is better qualifed to help with the writing process than a passionate editor with years of experience. Betsy Lerner, one of the most admired of American book editors, is such a one - and in this book she shares her editorial wisdom and provides a unique insider's understanding of the publishing process. From her long experience working with successful writers and discovering new voices, Betsy Lerner looks at different writer personality types; addresses the concerns of writers just getting started as well as those stalled mid-career; and describes the publishing process from the thrill of acquisition to the agony of the remainder table. Written with insight, humour and great common sense, this is the ultimate survival kit for writers everywhere.

“A rare gift: an inspiring tale about trees, trauma and the very purpose of life.” —Andrew Nikiforuk, author of Empire of the Beetle Diana Beresford-Kroeger—a world-recognized botanist and medical biochemist—has revolutionized our understanding of the natural world with her startling insights into the hidden life of trees. In this riveting memoir, she uncovers the roots of her discoveries in her extraordinary childhood in Ireland. Soon after, her brilliant mind bloomed into an illustrious scientific career that melds the intricacies of the natural world with the truths of traditional Celtic wisdom. To Speak for the Trees uniquely blends the story of Beresford-Kroeger’s incredible life and her outstanding achievement as a scientist. It elegantly shows us how forests can not only heal us as people but can also help save the planet.

In this collection of natural-history essays, biologist Joan Maloof embarks on a series of lively, fact-filled expeditions into forests of the eastern United States. Through Maloof’s engaging, conversational style, each essay offers a lesson in stewardship as it explores the interwoven connections between a tree species and the animals and insects whose lives depend on it—and who, in turn, work to ensure the tree’s survival. Never really at home in a laboratory, Maloof took to the woods early in her career. Her enthusiasm for firsthand observation in the wild spills over into her writing, whether the subject is the composition of forest air, the eagle’s preference for nesting in loblolly pines, the growth rings of the bald cypress, or the gray squirrel’s fondness for weevil-infested acorns. With a storyteller’s instinct for intriguing particulars, Maloof expands our notions about what a tree “is” through her many asides—about the six species of leafhoppers who eat only sycamore leaves or the midges who live inside holly berries and somehow prevent them from turning red. As a scientist, Maloof accepts that trees have a spiritual dimension that cannot be quantified. As an unrepentant tree hugger, she finds support in the scientific case for biodiversity. As an activist, she can’t help but wonder how much time is left for our forests.
