Emphasizing a family-centered approach to treatment, Pediatric Occupational Therapy and Early Intervention is a practical guide to providing occupational therapy services to young children. Written by a team of expert clinicians, this text illustrates the importance of successful early intervention and confronts specific challenges faced by direct service providers. Covering both the principles of early intervention and the application of current theory to everyday practice, Pediatric Occupational Therapy and Early Intervention details focused treatment strategies such as sensory integration assessment, assistive technology, and the power of play.

Being an effective midwife requires a range of knowledge and skills, all of which are essential to provide competent and safe care to childbearing women and their infants. Midwifery Skills at a Glance offers an invaluable, straightforward guide for students and practitioners - offering readable, easily digestible information, supported with illustrations throughout to enhance application to practice. Clear and concise throughout, Midwifery Skills at a Glance covers a wide range of skills - exploring issues such as infection control, personal hygiene care, and safeguarding; assessment, examination and screening skills; how to care for the woman and neonate with complex needs; drug administration and pain relief. A comprehensive, highly visual guide to the skills essential for safe, effective, and compassionate midwifery practice Written by experts in their field Briefly describes each skill and provides clear illustrations - making it an ideal companion in clinical practice Offers instruction on the safe use of a wide range of essential skills required to deliver safe, evidence-based maternity care Includes service user viewpoints and key points to help consolidate learning and reflect on the experience of receiving care Written with the student midwife in mind, Midwifery Skills at a Glance is equally invaluable for all others providing care, including Maternity Support Workers, mentors, registered midwives and medical students.

Children and Young People’s Nursing Skills at a Glance is the perfect companion for study and revision for pre-registration children’s nursing students. Highly visual, each clinical skill is covered in a two-page spread, with superb colour illustrations accompanied by clear informative text. Providing up to date, evidence-based information on a wide range of clinical skills that are required by today’s children’s nurses, this comprehensive and accessible text makes it easy for the reader to grasp the fundamentals in order to meet the care needs of the child and family, both in the hospital and community setting. Structured around the key systems of the body, the book is divided into sixteen sections, and covers all the essential clinical skills, including: Principles of assessment Communication Record keeping Drug calculations and administration Safeguarding Care planning Respiratory and cardiac care Gastrointestinal care ECG reading and interpretation Neurological assessment Musculoskeletal care. Aimed at both student nurses and those newly qualified, Children and Young People’s Nursing Skills at a Glance provides need to know, rapid information to ensure safe and effective clinical practice.

Management of Swallowing and Feeding Disorders in Schools examines the most significant issues in swallowing and feeding facing school-based speech-language pathologists (SLPs). Topics addressed are unique to the school setting, ranging from organizing a team procedure in a district to serving children with complex medical issues, behavioral feeding disorders, and neurological feeding disorders. Ethical, legal, and cultural issues are also addressed. Many students in school districts across the country exhibit the signs and symptoms of dysphagia, and children who were originally treated for dysphagia in hospitals and other settings often begin attending public schools at three years old. The difficulty they had with swallowing and feeding frequently follows them to the school setting. Further, there are many students who develop swallowing and feeding disorders as a result of traumatic brain injury, neurological disorders and syndromes, behavioral disorders, and so forth. The range of students needing services for swallowing and feeding disorders in the school setting can be from three to twenty-two years of age and from mild dysphagia to tube feeding. The identification and treatment of swallowing and feeding disorders in schools is relatively new. There are still many districts in the country and internationally that do not address the needs of children with dysphagia. As school-based SLPs take on the challenge of this population there is a need for information that is current, accurate, and thorough. University programs include very little training, if any, at this time in the area of swallowing and feeding in the school setting. This text is appropriate for both a dysphagia course as well as courses that train SLP students to work with school-aged students.
