Demand for protein is undergoing a period of unprecedented growth presenting opportunities for efficiencies, diversification & innovation. Read our industry analysis. This growth is driven by a number of factors, including:

The Future of Protein: Trends, Challenges & Opportunities ...

A couple of years ago, I presented at the University of Ottawa's "The Future of Protein" event. When many people talk about the future of our food system, they're looking at how to produce calories. I loved this event because it was all about protein, not just calories. We don't have an issue producing calories.

What is the Future of Protein? — Sacred Cow

The Future of Protein & the Protein of the Future in Europe Based on an increasing global demand for protein and that the resulting pressure on traditional animal sources is nowadays considered unsustainable, there is an urgent need of new sustainable protein alternatives with a high nutritional quality, safe and with technological functionalities that satisfy the consumer needs and expectations.

What is the Future of Protein? - Sustainable Dish

Increased demand for feed and food proteins Demand for "locally" produced protein sources for feed. In particular for market segments demanding non-GM and/or organic feed (dairy and aquaculture are first movers). Meat consumption is decreasing in some countries and demand for new plant based proteins is increasing.

Proteins for the Future - European Commission

The broad-level qualitative assessments of alternative protein sources were based on a combination of the current-day realities and the future potential (10–20 years) of each protein source. Positive (+) represents a protein source with high potential to meet demand, while negative (?) represents a protein source that has obstacles that will need to be overcome before development.

The Future of Aquatic Protein: Implications for Protein ...

The Future of Protein: Shaping the future of food. Our solution. We envisage a future in which everyone in our growing global population has access to healthy, sustainable and affordable sources of protein. Every player in the protein system has a role in driving change. Together, we can build a sustainable protein system by:

Protein Challenge 2040 | Forum for the Future

Animal-based proteins, especially those from large land mammals—like cows—is a climatological nightmare. A 2015 study by the Johns Hopkins Center for a Livable Future found that if current meat and dairy consumption levels continue, we'd likely exceed by 2050 the catastrophic 2-degree-Celsius global temperature rise that climate scientists have warned about.
