Get ready for your neonatal intensive care nursing certification exam with the only review developed in collaboration with three leading nursing organizations! From AACN, AWHONN, and NANN, Certification and Core Review for Neonatal Intensive Care Nursing, 5th Edition prepares you for your examination with hundreds of high-quality study questions and realistic test simulation. Based on the latest test plans of the AACN's CCRN®-Neonatal exam and the NCC's Neonatal Intensive Care Nursing (RNC-NIC) exam, review questions cover the changes to the Core Curriculum and reflect the latest evidence, essential knowledge, and best practices. New to this edition are three new chapters and 225 completely new review questions. This powerful study tool offers unparalleled preparation for your certification exam! Endorsed by the three most authoritative associations in neonatal intensive care nursing: the American Association of Critical-Care Nurses (AACN); the Association of Women's Health, Obstetric, and Neonatal Nurses (AWHONN); and the National Association of Neonatal Nurses (NANN). Realistic exam practice is offered through 675 total questions that mirror the certification exam content, the multiple-choice question format, and the distribution of content. Answers are provided for each question, accompanied by rationales and references, to enhance your understanding of the material. Online flexibility allows you to organize review questions and test format by your preferred examination, either the AACN or NCC. Online exam simulation — included free with each new copy of the book — mirrors the test-taking experience with an interactive, timed format. Customized study lets you choose whether to work through online questions in Study Mode or Examination Mode. Online remediation includes rationales for both correct and incorrect answers, and in-book remediation provides rationales for correct answers. A compact, portable size makes the book easier to study anytime, anywhere. 225 NEW review questions include 75 in the book and 150 additional online questions on the Evolve companion website. Thoroughly UPDATED review content reflects AACN's latest CCRN®-Neonatal exam and the NCC's latest Neonatal Intensive Care Nursing (RNC-NIC) exam, information in Core Curriculum for Neonatal Intensive Care Nursing, 5th Edition, and the newest evidence-based guidelines for neonatal critical care. NEW! Three new chapters include Grieving Process, Quality Improvement, and Facilitation of Learning. NEW focus on culturally sensitive care is included in an expanded Family Integration and Culturally Sensitive Care chapter. UPDATED rationales in the Answer Key are referenced to the most recent literature and evidence-based guidelines. Compatibility with iPads, iPhones, and other mobile devices allows online exam practice that is easy and convenient.

This book comprises six sets of single best answer practice papers. Each set contains 30 single best answer questions on physiology, pharmacology, clinical measurement and physics. The scenarios are based on the application of a wide knowledge of basic sciences relevant to the clinical practice of anaesthesia. The best possible answer to a given question is substantiated by detailed explanation drawn from recent journal articles and textbooks of anaesthesia and basic sciences. These questions enable the candidates to assess their knowledge in basic sciences and their ability to apply it to clinical practice. Alongside the previously published book Single Best Answer MCQs in Anaesthesia (Volume I - Clinical Anaesthesia, ISBN 978-1-903378-75-5), this book is an ideal companion for candidates sitting postgraduate examinations in anaesthesia, intensive care medicine, and pain management. It will also be a valuable educational resource for all trainees and practising anaesthetists.

Breast Imaging: A Core Review is a highly comprehensive text featuring 300 questions, answers, and explanations that residents can use for review. Nearly 200 images accompany the questions so the reviewer can self-quiz on the most important findings and diagnoses.

In Pediatric Critical Review, Board certified pediatric critical care physicians uniquely capture the essence of the most common critical care scenarios in a series of carefully crafted questions and answers. With their crisp and clear explanations, detailed references, and pertinent pictures, the authors illuminate—in an easy to read format—the essential facts and latest findings concerning the diagnosis and treatment of critical problems in the respiratory, cardiovascular, central nervous, endocrine, and gastrointestinal systems. Drawing on years of practical experience, they illuminate with simple straightforward explanations the major clinical issues involved in the critical care of pediatric infectious diseases, hematology, oncology, immunology, metabolic disorders, pain management, and traumatology.

This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references, but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available, but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner

Providing a detailed overview of respiratory medicine in one short volume, Respiratory Medicine Lecture Notes cover everything from the basics of anatomy and physiology through to information on a full range of respiratory diseases. Whether approaching the topic for the first time, starting a rotation, or looking for a quick-reference summary, medical students, specialist nurses, technicians and doctors in training will find this book an invaluable source of theoretical and clinical information.

Presenting core respiratory medicine coverage written in a clear, concise manner with explanations, this edition is updated in accordance with society and international guidelines, with an emphasis on common presentations and clinical problem-solving.

This extensively updated textbook is a comprehensive study guide that covers pediatric critical care principles and specific disease entities commonly encountered by the pediatric critical care medicine (PCCM) practitioner. Pathophysiologic aspects unique to the pediatric patient are emphasized. The first edition has become a highly utilized text for pediatric critical care fellows. The second edition will prove even more valuable to the fellow in-training and indeed to any clinical pediatric intensivist. In addition to updating the chapters from the previous edition, there are new chapters on topics such as central nervous structure and function, palliative care, child abuse and practical biostatistics. Pediatric Critical Care: Text and Study Guide is an invaluable clinically focused resource for PCCM practitioners. Allowing for concise reading on specific topics, this book acts as both text and study guide covering advanced physiology, pathophysiology, diagnostic considerations and treatment approaches that should be mastered by the higher level PCCM practitioner. The large number of illustrations complements the text in each chapter that also includes key references and case-orientated questions that help reinforce important ideas learned in the chapter.
